Brief Introduction

- Kenzo is a symbolic computation system devoted to Algebraic Topology.

Brief Introduction

- Kenzo is a symbolic computation system devoted to Algebraic Topology.
- Kenzo is written in Common Lisp.

Brief Introduction

- Kenzo is a symbolic computation system devoted to Algebraic Topology.
- Kenzo is written in Common Lisp.
- The challenge is now to increase the number of users and to improve its usability.

Brief Introduction

- Kenzo is a symbolic computation system devoted to Algebraic Topology.
- Kenzo is written in Common Lisp.
- The challenge is now to increase the number of users and to improve its usability.
- The first task we have undertaken is to design simply a friendly front-end.

Brief Introduction

- Kenzo is a symbolic computation system devoted to Algebraic Topology.
- Kenzo is written in Common Lisp.
- The challenge is now to increase the number of users and to improve its usability.
- The first task we have undertaken is to design simply a friendly front-end.
- After that, we have focused on devising a complete framework which makes the use of Kenzo easier to different clients.
